

Nadya Jerochim

Full Stack Developer

 Buenos Aires  dev@nady4.com  nady4.com  nady4  nady4

Full Stack Developer experienced in building web applications and serverless services using **React**, **Node.js**, **TypeScript**, and **Next.js**, as well as **SQL** and **NoSQL** databases. Maintainable code practices, clear documentation, and agile methodologies.

EXPERIENCE

Full Stack Developer

12/2024 –

Transistemas

12/2025

- Design and implementation of the organization's full-stack course and student management app.
- Maintenance and implementation of new requirements for the institutional website.
- Migration from bundler to Vite, hosting to Vercel, and DNS provider to Cloudflare.
- Development of Cloudflare Workers for monitoring DNS and nameserver configurations.
- Implementation of custom email routing using SMTP and POP3.
- Deployment automation, firewall configuration, and observability.
- Project documentation covering internal architecture, DNS configurations, deployments, and security policies.

Development Team Coordinator

07/2025 –

Transistemas

12/2025

- Cross-team coordination between Development, Design, Education, and Communications to assess organizational needs and propose potential software solutions.
- Recruitment, selection, and training of new members for the development team.
- Project management and technical task tracking through GitHub and Notion.
- Contact with other organizations to offer our services, train them in their use, and provide ongoing technical support
- Leadership of cybersecurity initiatives and modernization of the organization's digital infrastructure.

EDUCATION

Bachelor of Information Systems

2019 – 2025

National University of Lanús

High School Diploma in Economics and Administration

2011 – 2017

Jesús María Highschool

SKILLS

Frontend

React, Next.js, Astro, Vite, Tailwind CSS, Redux Toolkit, Tanstack Query, Zustand

Programming Languages

TypeScript, JavaScript, Python, Java, SQL, HTML5, SCSS, SASS/SCSS

DevOps & Cloud

Docker, GitHub Actions, CI/CD, Cloudflare (DNS, Workers, Firewall, Email Routing)

Tools

Git, Figma, n8n, Notion, Scrum, Agile

Spoken Languages

Inglés (C2), Español (Nativo)

Backend

Node.js, Express, REST API Design, Prisma ORM, Serverless Architecture, Cloudflare Workers, JWT Auth, OAuth2

Databases

PostgreSQL, MySQL, MongoDB, Redis, Supabase, NoSQL

Testing

Jest, Cypress, Vitest, Playwright

IA

Agentic AI Systems, Tool Calling, LLM Integration and Orchestration, MCP, RAG

PROJECTS

calendar-money

Full-stack cash flow management web application built with React, Vite, TypeScript, Node.js, Express, and MongoDB. Features include a landing page, calendar, drag-and-drop transaction management, advanced analytics with Chart.js, category-based budgeting, CSV backup and restore, and a customizable user interface.

nyady

Full-stack e-commerce platform built with Next.js (App Router), React, Prisma, PostgreSQL, NextAuth.js, and Redux Toolkit. Integrated with Mercado Pago for payment processing and Zipnova for shipping quotes and order fulfillment. Features include a landing page, product catalog, persistent shopping cart, coupons, volume-based discounts, shipping quotations, payment management, and order tracking.

nya-store

Full-stack e-commerce platform built with Next.js (App Router), TypeScript, Prisma ORM, PostgreSQL, Redux Toolkit, and a complete Mercado Pago integration (checkout, redirect flows, and webhooks). Supports authentication and authorization via NextAuth.js with JWT sessions.

ds-invite

Cloudflare Workers project handling Discord OAuth login, session cookie creation/validation, and role/invite request flows. Serves a lightweight frontend and provides protected API endpoints with modular controllers and utilities for encryption and cookie handling.
