

Nadya Jerochim

Full Stack Engineer

📍 Buenos Aires ✉ dev@nady4.com 🔗 nady4.com 🌐 nady4 🌐 nady4

Full Stack Engineer specialized in **product engineering**, **AI integrations**, and **systems architecture**. I design and build end-to-end products combining **React**, **TypeScript**, **Node.js**, and Cloudflare's **serverless** platform with **LLM orchestration**, **automation**, and **observability**.

EXPERIENCE

Full Stack Engineer

Transistemas

12/2024 –
08/2026

- Design, development, and maintenance of scalable full-stack applications for clients and NGO partners, including REST APIs, database architecture, responsive interfaces, and internal management platforms.
- Developed and optimized the institutional website, implementing new requirements, migrating from legacy bundling tools to Vite, and improving deployment workflows.
- Designed and built a domain and infrastructure monitoring system on Cloudflare Workers: cron-driven checks detecting DNS changes, nameserver inconsistencies, domain expiration (RDAP), DNSSEC, email security records (SPF/DMARC/DKIM) and web availability, with automated email alerts, Cloudflare KV snapshots and an external watchdog.
- Implemented deployment automation, firewall configuration, observability practices, and technical documentation covering architecture, infrastructure, security policies, and operational procedures.
- Collaborated with Design, Education, and Communications teams to identify organizational needs and translate them into software solutions.
- Managed client and NGO partnerships, contributing to lead generation, technical discovery, requirements gathering, stakeholder communication, and long-term technical support.
- Supported team growth through technical interviews, candidate evaluation, onboarding processes, and development workflow improvements.
- Led infrastructure modernization initiatives focused on reliability, maintainability, deployment automation, and operational resilience.

EDUCATION

Bachelor of Information Systems

National University of Lanús

2019 – 2025

High School Diploma in Economics and Administration

Jesús María Highschool

2011 – 2017

SKILLS

Frontend

React, Next.js, Astro, Vite, Redux Toolkit, TanStack Query, Zustand, Tailwind CSS

Programming Languages

TypeScript, JavaScript, Python, Java, SQL, HTML5, CSS3, SASS/SCSS

Infrastructure

Cloudflare Workers, KV, Cron Triggers, DNS Security, Email Authentication (SPF, DMARC, DKIM), Docker, GitHub Actions, CI/CD, Observability

Testing

Jest, Cypress, Vitest, Playwright

Spoken Languages

English (C2), Spanish (Native)

Backend

Node.js, Express, REST APIs, GraphQL, Prisma ORM, JWT Auth, OAuth2, Serverless

Databases

PostgreSQL, MySQL, MongoDB, Redis, Supabase, NoSQL

AI

LLM APIs Integration, Prompt Engineering, Tool Calling, Agent Orchestration, MCP, RAG, Workflow Automations

Tools

Git, Figma, n8n, Notion, Scrum, Agile

PROJECTS

dns-monitor

Domain and infrastructure monitoring with email alerts: detects changes to DNS, nameservers, registrar, DNSSEC, certificates, email configuration, website availability, and monitor health. Built on Cloudflare Workers with scheduled cron checks, KV storage, and DNS-over-HTTPS lookups.

calendar-money

AI-powered full-stack cash flow management web application built with React, Vite, TypeScript, Node.js, Express, and MongoDB. Featuring an interactive calendar with drag-and-drop transactions, instant search, receipt scanning, advanced Chart.js analytics, category-based budgeting, CSV/PDF backup and restore, adaptive responsive layouts, and a customizable UI.

nyady

Full-stack e-commerce platform with product catalog, persistent shopping cart, coupons, shipping quotations, payment management and order tracking.
Built with Next.js, TypeScript, Redux Toolkit, Prisma + PostgreSQL y NextAuth. Integrated with MercadoPago and Zipnova.
